DETAILED ACTION

New Grounds of Rejection

1. The finality of the previous rejection has been withdrawn because the current grounds for rejections have not been presented to applicant before.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
3. Claims 1-6, 8, 9, 12-15, and 17 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
4. The terms "relatively high pressure " and "relatively low pressure " in claims 1-6, 8, 9, 12-15, and 17 are relative terms which render the claim indefinite. The terms "relatively high pressure " and "relatively low pressure " are not defined by the claim, the specification does not provide a standard for ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprised of the scope of the invention.

Pertinent Prior Art

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

U.S. Patent 6,014,892 (Baret et al.)

U.S. Patent 5,661,229 (Bohm et al.)

U.S. Pre-Grant Publication 2005/0199042 (Perkins et al.) is a commonly owned application with the current application.

U.S. Patent 4,918,975 (Voss) discloses leak detection with a trace gas such as helium with a membrane permeable to the trace gas.

U.S. Patent 3,951,827 (Hall) discloses an ion pump, a membrane permeable to trace gasses as well as a mass spectrometer for determining leaks of various sizes.

U.S. Patent 3,280,619 (Spies) discloses a leak detection system where the charge of an ion pump is used to determine the concentration of a tracer gas escaping an article.
